Parliament and of the Council of 9  
March 2011

MEMBER OF EOTA

## European Technical Assessment ETA-10/0210 of 02/07/2015

### I General Part

**Technical Assessment Body issuing the ETA and designated according to Article 29 of the Regulation (EU) No 305/2011: ETA-Danmark A/S**

**Trade name of the construction product:**

Gust. Alberts GmbH & Co. KG post bases type 326, 327, 345, 345VA, 365, 365v, 365VA, 366, 367, 367VA, 369, 370, 375, 376, 393, 394, 395, 396, 397, 398, 399, 401, 451, 472, 476, 480, 481, 566, 569, 577, 579, 580, 581, 583, 655, 665 and 751

**Product family to which the above construction product belongs:**

Three-dimensional nailing plate (Post bases for the support of timber columns and posts as load-bearing elements)

**Manufacturer:**

Gust. Alberts GmbH & Co KG  
Gewerbegebiet Grünenthal  
D-55845 Herscheid  
Tel. +49 2357 907 0  
Fax +49 2357 907 189  
Internet [www.gah.de](http://www.gah.de)

**Manufacturing plant:**

HW1, HW2 and HW3

**This European Technical Assessment contains:**

33 pages including 2 annexes which form an integral part of the document

**This European Technical Assessment is issued in accordance with Regulation (EU) No 305/2011, on the basis of:**

Guideline for European Technical Approval (ETAG) No. 015 Three Dimensional Nailing Plates, April 2013, used as European Assessment Document (EAD).

**This version replaces:**

The previous ETA with the same number issued on 2010-08-13 and expiry on 2015-08-13

Translations of this European Technical Assessment in other languages shall fully correspond to the original issued document and should be identified as such.

Communication of this European Technical Assessment, including transmission by electronic means, shall be in full (excepted the confidential Annex(es) referred to above). However, partial reproduction may be made, with the written consent of the issuing Technical Assessment Body. Any partial reproduction has to be identified as such.

## II    SPECIFIC PART OF THE EUROPEAN TECHNICAL ASSESSMENT

### 1    Technical description of product and intended use

#### Technical description of the product

The GAH post bases are made of 4.0 mm to 8.0 mm steel plates. The post bases are produced of steel grade S235JR according to EN 10025-2:2005-04 with a minimum characteristic yield strength of  $R_{eH} = 235 \text{ N/mm}^2$  and a minimum characteristic tensile strength of  $R_m = 360 \text{ N/mm}^2$  or of steel grade 1.4301 according to EN 10088-3:2005-09 with a minimum characteristic yield strength of  $R_{p0,2} = 190 \text{ N/mm}^2$  and a minimum characteristic tensile strength of  $R_m = 500 \text{ N/mm}^2$ .

For the connections with metal fasteners bolts  $\phi 10 \text{ mm}$  and  $\phi 12 \text{ mm}$  (S235) with minimum characteristic tensile strength of  $R_m = 360 \text{ N/mm}^2$  and coach screws 8x60 mm and 10x60 mm according to EN 14592 (DIN 571 and thread according to DIN 7998) with minimum characteristic tensile strength of  $R_m = 360 \text{ N/mm}^2$  are used. The screws shall be driven into pre-drilled holes according to EN 1995-1-1, 10.4.5.

The outer diameter for washers of bolts shall be not less than  $3 \cdot d_B$ , where  $d_B$  is the diameter of the bolts. The thickness shall be not less than  $0,3 \cdot d_B$ .

For anchorage in the foundation reinforcement bars or steel profiles are used.

Dimensions are shown in Annex A and B.

### 2    Specification of the intended use in accordance with the applicable EAD

The intended use of the post bases is the support of timber columns and posts as load-bearing elements, where requirements for mechanical resistance and stability and safety in use in the sense of the Basic Works Requirements 1 and 4 of Regulation (EU) 305/2011 shall be fulfilled.

The static and kinematical behaviour of the timber members or the supports shall be as described in Annex B.

The timber posts may be of solid timber of strength class C24 or better according to EN 338:2003-09. Minimum dimensions for the post have to be considered (Annex A). The end grain of the timber post

in general must be plane on the base plate of the post base. Post bases type 345, 345VA and 399 may have a clearance between the end grain of the timber post and the base plate of the post base due to constructive wood preservation (maximum 10 mm).

The maximum distance between the foundation and the base plate of the post base shall in general be 50 mm. For post bases type 375, 395, 396, 401, 480, 476, 481, 577, 579, 580, 581 and 583 larger distances are allowed.

Annex B states the load-carrying capacities of the post bases for solid timber of strength class C24 according to EN 338:2003-09. The design of the connections shall be in accordance with Eurocode 3 and Eurocode 5 or a similar national code. The anchorage of the post base in the foundation and imperfections exceeding the assumptions in Eurocode 5, 5.4.4 are not part of this ETA.

The post bases are for use in timber structures subject to the service classes 1, 2 and 3 of Eurocode 5 and for connections subject to static or quasi-static loading. The corrosion protection is given by stainless steel or zinc coating with minimum thickness of 55  $\mu\text{m}$  according to EN1461. The metal fasteners must also have a zinc coating for the intended use in service class 3 of EN 1995-1-1 (zinc coating Fe/Zn 25c according to EN ISO 2081).

The scope of the post bases regarding resistance to corrosion shall be defined according to national provisions that apply at the installation site considering environmental conditions.

The provisions made in this European Technical Assessment are based on an assumed intended working life of the connectors of 50 years.

The indications given on the working life cannot be interpreted as a guarantee given by the producer or Assessment Body, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

### 3 Performance of the product and references to the methods used for its assessment

Characteristic	Assessment of characteristic
<b>3.1 Mechanical resistance and stability*) (BWR1)</b>	
Characteristic load-carrying capacity	See Annex B
Stiffness	No performance determined
Ductility in cyclic testing	No performance determined
<b>3.2 Safety in case of fire (BWR2)</b>	
Reaction to fire	The post bases are made from steel classified as <b>Euroclass A1</b> in accordance with EN 1350-1 and EC decision 96/603/EC, amended by EC Decision 2000/605/EC
<b>3.3 Hygiene, health and the environment (BWR3)</b>	
Influence on air quality	The product does not contain/release dangerous substances specified in TR 034, dated March 2012*)
<b>3.7 Sustainable use of natural resources (BWR7)</b>	
<b>3.8 General aspects related to the performance of the product</b>	No Performance Determined
The post bases have been assessed as having satisfactory durability and serviceability when used in timber structures using the timber species described in Eurocode 5 and subject to the conditions defined by service class 1 and 2	
Identification	See Annex A

\*) See additional information in section 3.9 – 3.12.

\*\*) In addition to the specific clauses relating to dangerous substances contained in this European technical Assessment, there may be other requirements applicable to the products falling within its scope (e.g. transposed European legislation and national laws, regulations and administrative provisions). In order to meet the provisions of the Construction Products Regulation, these requirements need also to be complied with, when and where they apply.

### 3.9 Methods of verification

The characteristic load-carrying capacities are based on the characteristic values of the connections with metal fasteners, the steel plates and the timber post.

In the case of timber failure or failure of the metal fasteners, the design values shall be calculated according to EN 1995-1-1 by dividing the characteristic values of the load-carrying capacities by different partial factors for the strength properties in addition multiplied with the coefficient  $k_{\text{mod}}$ .

In the case of steel failure, the design value shall be calculated according to EN 1993-1-1 by reducing the characteristic values of the load-carrying capacity with different partial factors.

The design value of the load-carrying capacity is the smaller value of both load-carrying capacities:

$$F_{\text{Rd}} = \min \left\{ \frac{k_{\text{mod}} \cdot F_{\text{Rk,H}}}{\gamma_{M,H}}, \frac{F_{\text{Rk,S}}}{\gamma_{M,S}} \right\}$$

Therefore, for timber failure or failure of the metal fasteners the load duration class and the service class are included. The different partial factors  $\gamma_M$  for steel or timber, respectively, are also correctly taken into account.

### 3.10 Mechanical resistance and stability

See Annex B for the characteristic load-carrying capacity in the different directions  $F_1$  to  $F_5$  for solid timber of strength class C24 according to EN 338:2003-09. Using the load-carrying capacities of the post bases, the specifications in Annex A must be fulfilled. The end grain of the timber post must in general be plane on the base plate of the post base. Post bases type 345, 345VA and 399 may have a clearance between the end grain of the timber post and the base plate of the post base due to constructive wood preservation (maximum 10 mm).

The characteristic capacities of the post bases are determined by calculation according to Eurocode 3 and Eurocode 5. They should be used for designs in accordance with Eurocode 3 and Eurocode 5 or a similar national code.

#### *GAH Alberts connector screws*

In the formulas in Annex B the capacities for coach screws 8x60 mm and 10x60 mm according to EN 14592 (DIN 571 and thread according to DIN 7998) with minimum characteristic tensile strength of  $R_m = 360 \text{ N/mm}^2$  are used. The screws shall be driven into pre-drilled holes according to EN 1995-1-1, 10.4.5.

No performance has been determined in relation to ductility of a joint under cyclic testing. The contribution to the performance of structures in seismic zones, therefore, has not been assessed.

No performance has been determined in relation to the joint's stiffness properties - to be used for the analysis of the serviceability limit state.

No performance has been determined in relation to the anchorage of the post bases in the foundation. It must be checked by the designer of the structure to ensure it is not less than the post base capacity and, if necessary, the post base capacity reduced accordingly. Therefore the specifications for the lever arms  $e_{F2/F3}$  (for load case  $F_2 / F_3$ ) and  $e_{F4/F5}$  (for load case  $F_4 / F_5$ ) in annex A have to be considered. The lever arm is the distance between the top edge of the foundation and the load.

### 3.11 Aspects related to the performance of the product

**3.11.1 Corrosion protection in service class 1 and 2.**  
In accordance with ETAG 015 the post bases are made from steel grade S235JR according to EN 10025-2:2005-04 with a minimum characteristic yield strength of  $R_{eH} = 235 \text{ N/mm}^2$  and a minimum characteristic tensile strength of  $R_m = 360 \text{ N/mm}^2$

**3.11.2 Corrosion protection in service class 3**  
In accordance with Eurocode 5 the post bases are made from steel grade 1.4301 according to EN 10088-3:2005-09 with a minimum characteristic yield strength of  $R_{p0,2} = 190 \text{ N/mm}^2$  and a minimum characteristic tensile strength of  $R_m = 500 \text{ N/mm}^2$ .

### 3.12 General aspects related to the fitness for use of the product

The performance given in this ETA are based on the following:

- The primary structural member – the post member shown in typical installation page 17 or a beam member - to which the post bases are fixed shall be:
  - Restrained against rotation
  - Capable to transfer the force to the post bases as assumed.
  - Free from wane in areas in contact with the post base.

- The secondary structural member – the concrete support - to which the post bases are fixed shall be:
  - Made from concrete of at least strength class C15, unless otherwise is indicated in annex B of this ETA.
- To ensure sufficient capacity the designer has to take into account splitting of the timber.
- The timber member shall be free from wane.
- There shall be no gap between the timber and the horizontal contact area.
- Otherwise, the gap between the timber member and the post base may not exceed 3 mm.
- There are no specific requirements relating to preparation of the timber members.

The calculations are based on not pre-drilled holes for nails and screws. However, the holes for lag screws, dowels and bolts have to be pre-drilled.

## **4 Attestation and verification of constancy of performance (AVCP)**

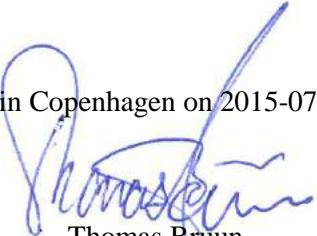

### **4.1 AVCP system**

According to the decision 97/638/EC of the European Commission<sup>1</sup>, as amended, the system(s) of assessment and verification of constancy of performance (see Annex V to Regulation (EU) No 305/2011) is 2+.

## **5 Technical details necessary for the implementation of the AVCP system, as foreseen in the applicable EAD**

Technical details necessary for the implementation of the AVCP system are laid down in the control plan deposited at ETA-Danmark

Issued in Copenhagen on 2015-07-02 by

Thomas Bruun  
Managing Director, ETA-Danmark

**Annex A**  
**Product details and definitions**

Table A.2 Specifications of the metal fasteners according to EN 14592

Fastener type (S235)	Size (mm)			Finish
	Diameter	Length	Thickness	
Dowels	10 mm			Galvanic zinc coating
Bolts	10, 12 mm			Galvanic zinc coating
Washers	30, 36 mm		3, 3.6 mm	Galvanic zinc coating
Screws	8, 10 mm	60 mm		Galvanic zinc coating

The load-carrying-capacities of the metal fasteners were calculated according to Eurocode 5 for lateral loads. The contribution to the load-carrying capacity due to the rope effect was considered according to Eurocode 5.

**Annex B**  
**Characteristic load-carrying capacities**

Table B.1 Characteristic load-carrying capacities for post bases

	121	12,7	2,75	-	8,91	2,75	-	5,94	-	1,39	7,43	2,46
		$\gamma_m$	$\gamma_{m,0}$	$\gamma_{m,2}$	$\gamma_m$	$\gamma_{m,0}$	$\gamma_{m,2}$	$\gamma_m$	-	$\gamma_{m,2}$	$\gamma_m$	$\gamma_{m,0}$

### Definitions of forces, their directions and eccentricity

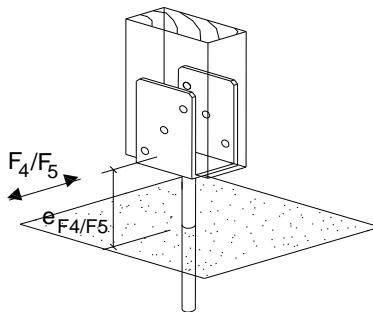

- Force  $F_1$ : tensile or compression load

- Force  $F_2 / F_3$ : horizontal load parallel to the side plates of the post base

- Force  $F_4 / F_5$ : horizontal load perpendicular to the side plates of the post base

### Acting forces

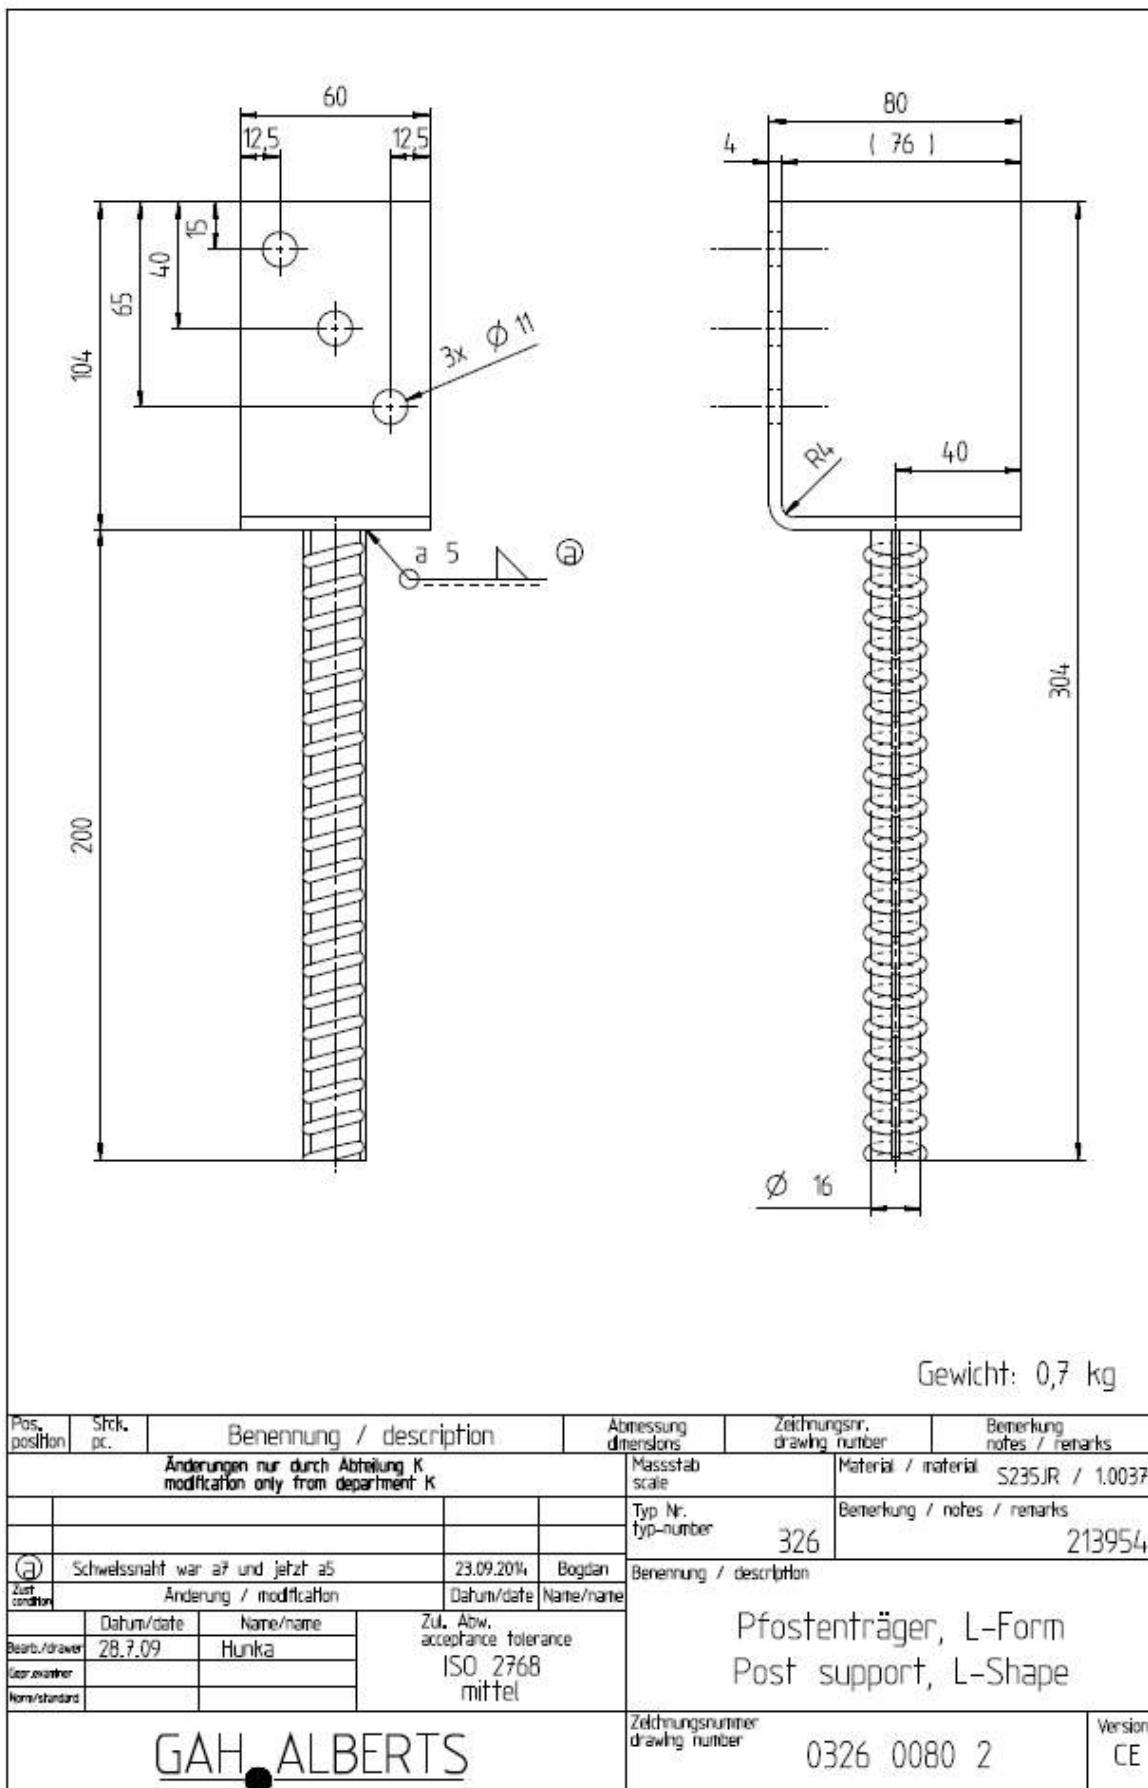

$F_1$	axial force (tension or compression) acting along the central axis of the joint
$F_2$ and $F_3$	horizontal force parallel to the side plates of the post base acting with the lever arm $e_{F2/F3}$ above the foundation
$F_4$ and $F_5$	horizontal force perpendicular to the side plates of the post base acting with the lever arm $e_{F4/F5}$ above the foundation

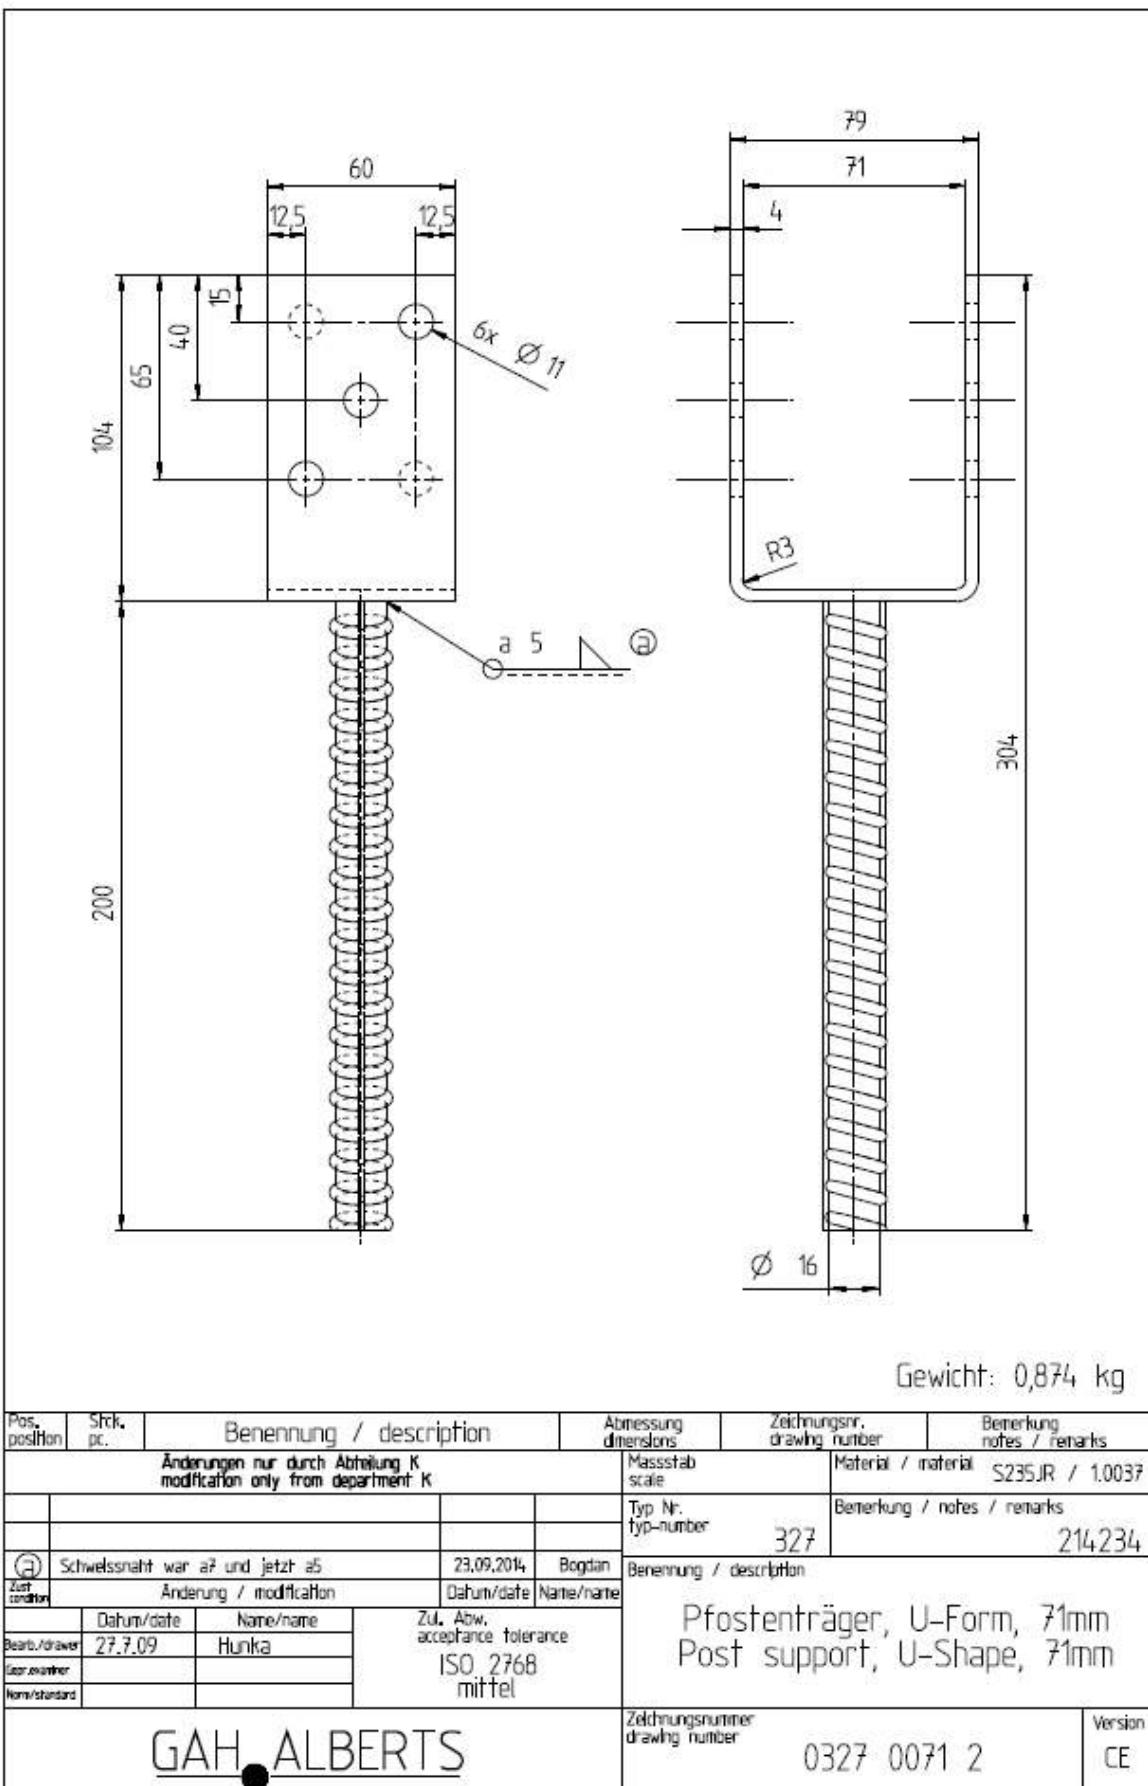

### Combined forces

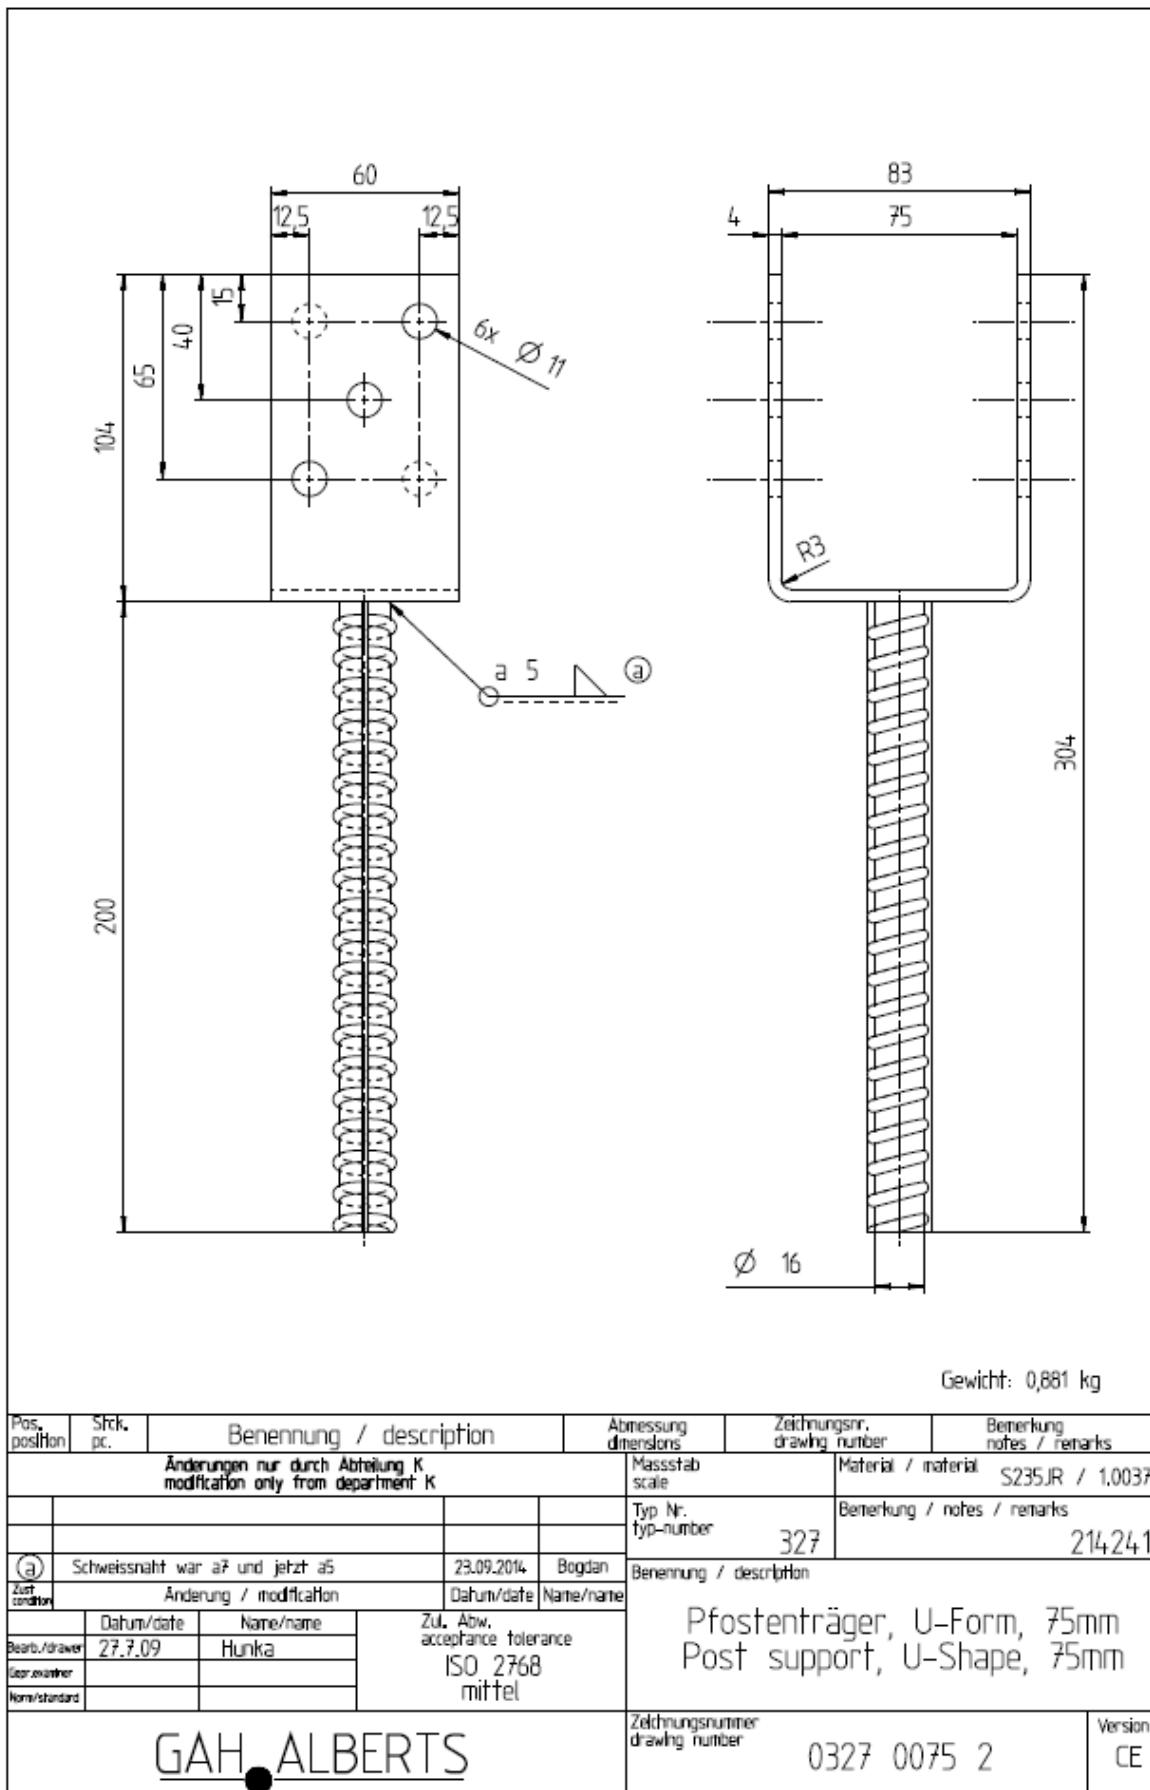

If the forces  $F_1$  and  $F_2/F_3$  or  $F_4/F_5$  act at the same time, the following inequality shall be fulfilled:

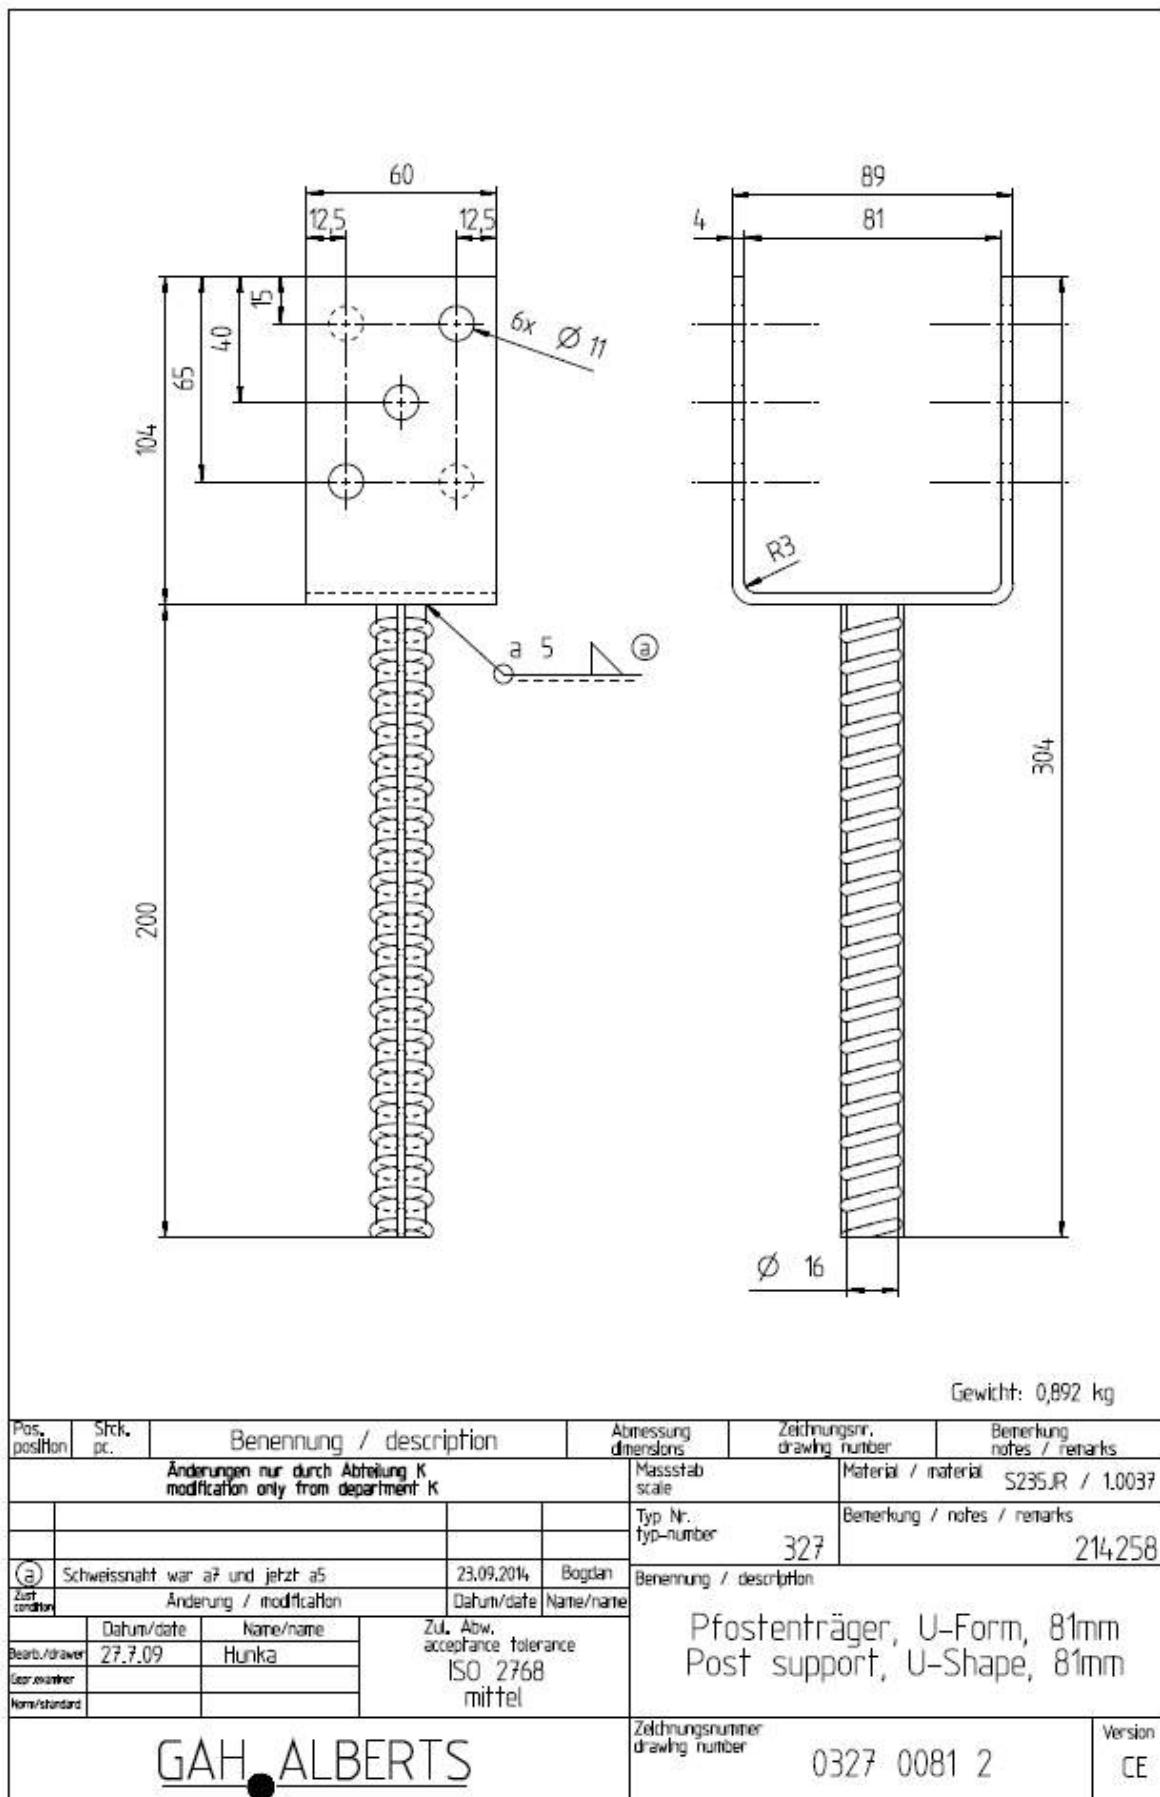

$$\sum \frac{F_{i,d}}{R_{i,d}} \leq 1$$

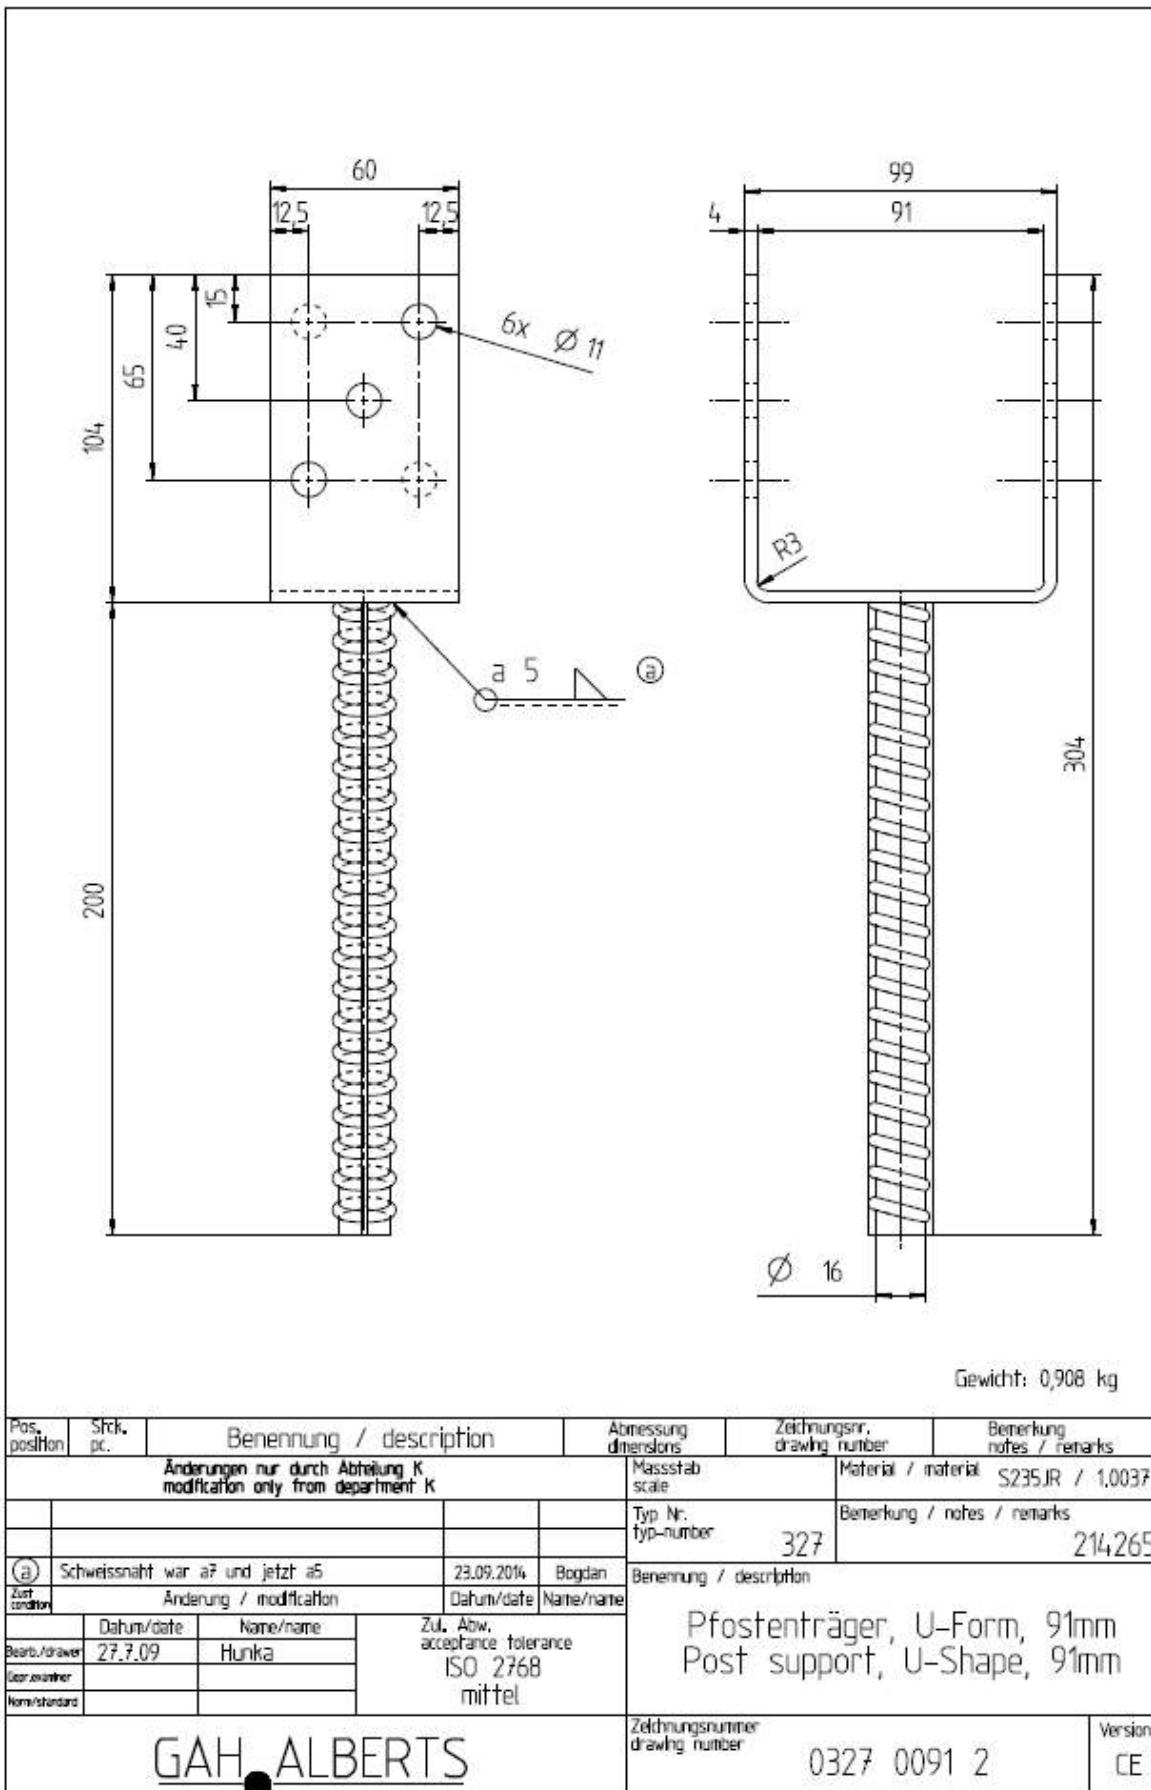

The forces  $F_2$  and  $F_3$  or  $F_4$  and  $F_5$  are forces with opposite direction. Therefore only one force  $F_2$  or  $F_3$ , and  $F_4$  or  $F_5$ , respectively, is able to act simultaneously with  $F_1$ .
